

ORIFICE METER EXCELLENCE

CARRIER PLATE OPTIONS

The TMCO Orifice Fittings are designed with the customer in mind. As with previous product enhancements, our customers asked and we delivered. TMCO now offers a notched plate carrier option available in the following sizes:

- **2" - 6" Dual Chamber SureShot**
- **2" - 6" Single Chamber SureShot**

The standard TMCO fitting can be used with either a TMCO seal (recommended) or a notched seal by switching out the plate carrier to a notched seal design. The fitting may be switched back and forth by changing the plate carrier from the standard TMCO design to the notched plate carrier. The TMCO fitting can be ordered with either the standard SureShot plate carrier and seals, or the notched design plate carrier and seals.
